This is the introduction for the upper Hierarchical Bar Chart which aggregate and hierarchically explore indicators of all patients. First level: number of patients in every institution (within a health-service zone, province), with each bar colored by pain-level mode. Second level: Number of patients per each pain-level quartile

This diagram shows the distribution of age groups in Canada over the last 10 years. The blue bars are the male population for each five-year age bracket, while the pink bars are the female population; the bars are partially transparent so that you can see how they overlap. The slider is for adjusting the age brackets.
